Issue #2 02.01.2020

In this Issue:

Best Paper Award
Research Activities
Students Activities
Faculty Promotion
Faculty of the Month

Editorial

We thank the Dean of the college of computer science and information systems Dr. Abdullah Alabas for his support and motivation for **TechNU**. We are delighted with the feedback we got about the first edition, and the participation in the second edition was encouraging. The editing team always welcomes your contribution and accomplishments to this flyer.

Special thanks to everyone made the second issue possible.

Dr. Abdullah Alghamdi

Dr. Adel Rajab

Dr. Turki Alelyani

Mr. Yahya Almazni

Ms. Asma Alraizzah

Ms. Soad Almula

Ms. Majd Ibrahim

Director of Research Unit

Dr. Adel Sulaiman

Dr. Adel Rajab is the Vice Dean of Graduate Studies Affairs for Academic Affairs

Dr. Adel D. Rajab is working as an Assistant Professor, Vice dean of graduate studies for academic affairs at Najran University, Najran, Saudi Arabia. He received Ph.D., master and Bachelor in Computer Science and Engineering from University of South Carolina, United States. His research area are robotics, Drones, Machine Learning and bioinformatic.

Dr. Mohammed Hamdi is the Vice-Dean of the Computer College for Development and Quality.

Dr. Mohammed Hamdi is an Assistant Professor of Computer Science and Information Systems at Najran University, Saudi Arabia. He received his PhD and MSc in Computer Science from Southern Illinois University-Carbondale in 2013 and 2018, respectively. His main research interests are databases, query optimization, data mining, big data, and crowdsourcing systems.

Dr. Mana Al Reshan is promoted Assistant Professor in College of Computer Science and Information Systems

Dr. Mana Saleh Al Reshan received his bachelor's degree in information systems from king Khalid university. Master's degree in computer, information and network security from DePaul University, Chicago, IL, USA. He received Doctor of Philosophy in Computer Science, information security from The Catholic University of America, Washington, DC, USA Dr. Al Reshan Research areas include Body Area network security, information security, cloud security, cybersecurity, and wireless security.

Mr. Mohammed Hunaidi's paper is accepted in IEEE Internet of Things Journal with IF 9.515

Mr. Mohammed Hunaidi Assiri received a Master of Science in Computer Network from King Fahd University of Petroleum and minerals (KFUPM), Dhahran, Kingdom of Saudi Arabia, in 2019 and Bachelor's in computer science from King Khaled University, Abha, Saudi Arabia (2007). He has a desire to pursue a Ph.D. in computing and computer networks sciences. His aim is to contribute to academic work, applied research, and a quality assurance environment using innovation, cooperation, and self-development.

A Novel Approach for Efficient Management of Data Lifespan of IoT Devices

Abstract:

Wireless sensor networks (WSNs) are mainly data-driven networks adopted to improve the Internet of Things (IoT) in terms of data throughput, energyefficiency and self-management. Improving the data lifespan of WSN impacts the performance of the IoT. Achieving data reliability in applications of WSNs deployed in harsh environments is challenging due to the extreme constraints in resources of sensor nodes (SNs). Motivated by the inexpensive infrastructure of WSNs, a number of distributed storage systems have been proposed focusing on achieving data Survivability rather than network reliability. In this paper, we focus on data storage at the things layer, (wireless sensors). We evaluate the performance of a number of distributed data storage systems over WSN running over the Zigbee MAC protocol. Based on our findings, we introduce a new efficient-energy data dissemination scheme called Data Survivability with Energy Efficiency (DSwEE) that outperforms existing schemes. We compare DSwEE against two prominent protocols in data storage, namely: Decentralized Erasure Code for Data Survivability (DEC-DS) and Decentralized Erasure Code Encode-and-Disseminate (DEC-EaD). Results show that DSwEE achieves better performance than both of DEC-DS and DEC-EaD in terms of the energy consumption and data recoverability for localized failures, which improves the lifespan of the network. Excellent paper Award for Ms. Asmaa Alraizzah & Dr. Samar Alqahtani

Name of the award:

Academicsera Excellent paper Award for the paper entitled" Steganography Android Application Using LSB and DCT Techniques for Gray and Color Images", for the category Best Presentation/ Best Content at the Academicsera International Conference held in Jeddah, Saudi Arabia on 4th – 15th November, 2019.

Title:

Steganography Android Application Using LSB and DCT Techniques for Gray and Color Images

Abstract - Due to increased unauthorized access of confidential data, information security has become immensely important. Thus, it has become vital to reduce the chances of information detection during transmission. Steganography is an art of communication that hides secret message data over a public channel using a secret key. A hidden text message can be conveyed by superimposing a secret message into a covered message; whereby, only the sender and the receiver can know about it, and a third person cannot suspect it exists. The image with the hidden message is called a stego image. This paper introduces a steganography Android application. The aim of the application is to hide and retrieve text messages in images using a secret key and the least significant bit (LSB) modification with discrete cosine transform (DCT) techniques. The results show that the LSB and DCT techniques are better than results of the previous studies based on calculating the Mean Square Error and Bit Error Rate. The proposed application offers many features such as allows users to send stego image using any application that allows image sharing it overcomes the disadvantages to changes in image resolution and it improves the level of security.

Programing Club

1. About the club: The Programming Club is established under the supervision of the College of Computer Science and Information System at Najran University. It aims to promote and develop the programming culture and skills to the interested Najran University students by providing courses that can refine the programming skills obtained in classes in order to compete in various programming events.

2. **Club Vision:** Promoting and enhancing the knowledge and skills of the various programming languages among the students in the College of Computer Science and

Information Systems students and those interested in the Najran University.

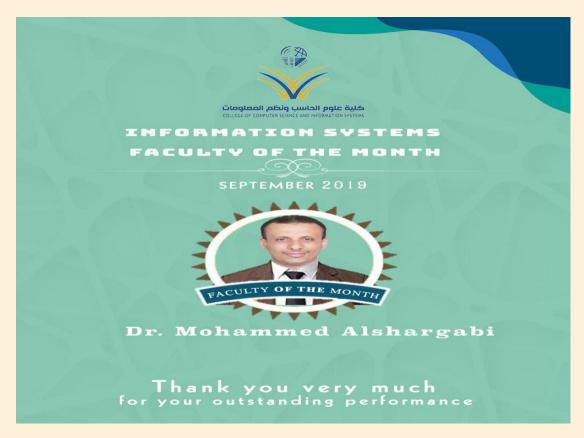

- 3. **Club Mission:** Supporting and motivating students in enhancing their computer programming skills.
- 4. **Club Objectives:** 1. Motivating students' self-learning. 2. Developing students' skills in programming. 3. Motivating students to think in innovative ways and show their talents. 4. Creating a spirit of teamwork.

5. **Membership Requirements**: 1. The member should be one of Najran University students. 2. The member should have completed one or more programming courses or has enough programming skills. 3. The member should attend workshops, and participate, and be active. 4. The member should attend the regular meetings of the club.

التقنية في حياتنا

من هذا المنطلق من العنوان نعلم أننا سنتحدث عن التقنية الحديثة التي اجتاحت حياتنا اليومية بشكل ملحوظ ولا تقتصر في استعمالنا للهواتف الذكية أو الحواسيب المحمولة وإنما هي بسائر يومنا كله تبدأ من استيقاظنا من النوم في الصباح الباكر وحتى العودة إلى المنزل بعد إنقضاء يوم عصيب. تبدأ ظاهرة استخدامنا للتقنية عند الاستيقاظ صباحًا من تطبيق المنبه عبر الهاتف الذكي المحمول حتى توفير سائقين أجرة من الهاتف عن طريق تطبيق أوبر أو كرم وحتى آلية الدفع عند الوصول إلى الوجهة المحددة عن طريق أبل بي فلنفترض أنك قد وصلت إلى عملك فذلك سيتطلب منك إثبات حضورك عن طريق البصمة الخاصة بك إلى أن تصل إلى مكتبك وأفترض أن الشركة التباع لها قد أعدت وجبة عمل فبدلا من وقوف النادل والاستماع الى طلبات الاخرين الآن أصبح الطلب عن طريق وإنما في مجالات عدة مثل مجال التعليم ومجال الهندسة ومجال الترفيه أيضًا. ولإضافة المتعة في التعليم يستخدم وإنه المناد الذكاء وتعزيز روح المنافسة بين الطلاب كما أن أصبح الواقع الحالي واقعا الموسيا معززا باستخدام تقنيات سمعية مرئية. ثانيا مجال الهندسة فبدل من الرسم على الورق هناك خاصية المرسم وهي رسم ثلاثي الابعاد تمكن المهندس من رؤية أفكاره وتطبيقها بشكل جيد. أخيرًا وليس آخرًا مجال الترفيه للاطفال والبالغين العاب الفيديو والواقع الافتراضي تمكن اللاعب من خوض تجربة وكانها حقيقية. ختاماً لا تنهض ولا تتقدم الدول الا بالتقنية فالتقنية في المستقبل لن تقل أهميتها عن الحاضر لا سيما مع التطور السريع وغزو الذكاء الصناعي في شتى تفاصيل حياتنا.
